If you can see this icon  on your toolbar you can take advantage of the advanced search facilities built into the latest versions of Adobe Acrobat Reader.

If you cannot see this icon you can install the latest version of Adobe Acrobat + Search from the Reader folder on this CD- Rom. Unfortunately this feature is only available to Windows and Macintosh users.

Search is a powerful tool that allows you to search across the entire Definite Linux Bookshelf. You can search for a simple word or phrase, or you can expand your search query by using wild-card characters and operators.

When you have performed a search you can review the search results by clicking on the  icon.

You can also move backwards and forwards through your search results using the  buttons.

Advanced users can get further help on the Search tool from the Acrobat Reader Guide which you will find in the Help menu.
